Solutions Beyond Code

# OmniaSys Solutions Pvt. Ltd.

*Engineering Intelligent Systems for Smarter Businesses*

*OmniaSys  
Innovations*

## ***Driving Digital Transformation Through Innovation***

*OmniaSys Solutions Pvt. Ltd. is a forward-thinking IT solutions company specializing in custom software development, ERP systems, cloud technologies, and advanced analytics. We help businesses streamline operations and scale efficiently through secure, agile, and tailor-made technology solutions. Our approach combines innovation, domain expertise, and modern architectures to deliver measurable business outcomes.*

Accelerating Innovation

Empowering Teams

### Company Overview

Founded in 2023, OmniaSys Solutions Pvt. Ltd. delivers custom software, ERP, cloud, API, and analytics solutions, combining innovation, agility, and domain expertise to solve complex business challenges.

### In-House Technology Team

OmniaSys operates with a fully in-house IT development team, ensuring complete control over integrations, customizations, security, and delivery timelines without dependency on external vendors.

### Experienced & Skilled Workforce

Our team consists of 14 dedicated IT professionals, including developers, analysts, designers, and network specialists, led by an IT Head with 18 years of industry experience.

### Core Strengths & Domain Focus

We specialize in ERP systems, mobile applications, API and EDI integrations, and logistics-focused solutions, delivering highly customized, scalable, and sustainable technology platforms.

About

**OmniaSys Solutions**

# Vision, Mission & Values

## Vision

To become a trusted technology partner delivering intelligent, scalable, and secure digital solutions that transform logistics and enterprise operations through innovation, reliability, and continuous technological advancement.

## Mission

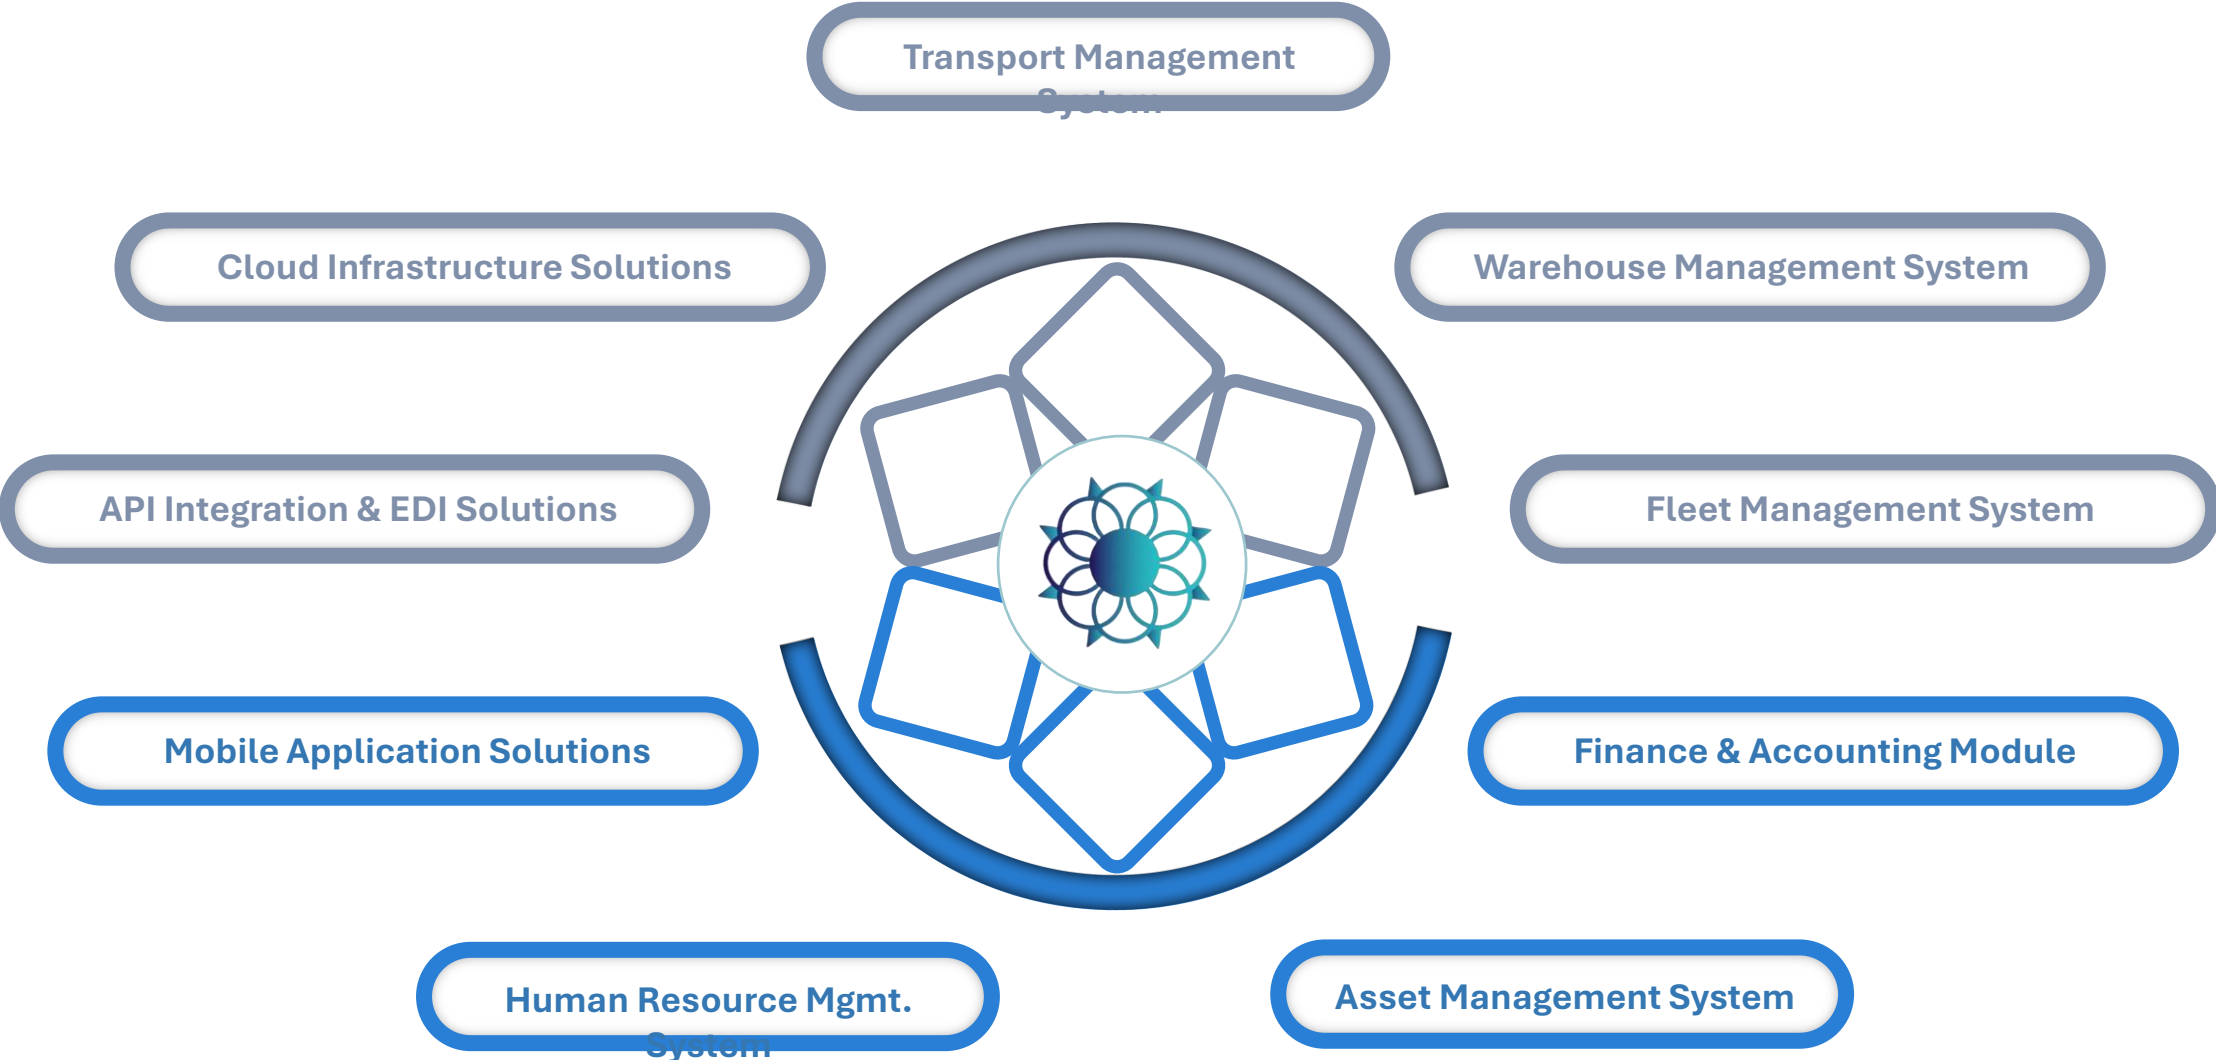

To design and deliver customized IT, ERP, and integration solutions using agile methodologies, deep domain expertise, and in-house innovation, enabling businesses to optimize operations, enhance visibility, and achieve sustainable growth.

## Values

Innovation-driven thinking, customer-centric execution, data security, operational excellence, transparency, agility, and accountability guide our teams to consistently deliver high-quality, scalable solutions with measurable business impact.

# OmniaSys Product Ecosystem

# 1. Transport Management System (TMS)

## **Order & Shipment Lifecycle Management**

Manages the complete shipment lifecycle from order creation to final delivery, ensuring accurate documentation, status tracking, exception handling, and seamless coordination across transport stakeholders.

## **Carrier, Vendor & Contract Management**

Centralizes carrier onboarding, rate cards, contracts, and performance tracking, enabling transparent vendor management, cost optimization, and consistent service quality across transport partners.

## **Billing, Settlements & Reconciliation**

Automates freight billing, trip-based settlements, invoice validation, and reconciliation processes, reducing manual errors, improving financial accuracy, and accelerating payment cycles.

## **System Integrations & Scalability**

Integrates seamlessly with ERP, WMS, GPS, telematics, and third-party platforms through APIs, supporting scalable growth, real-time data exchange, and future-ready transport operations.

## 2. Warehouse Management System (WMS)

01

### Inventory Visibility & Control

- Provides real-time visibility into inventory across locations, enabling accurate stock levels, batch tracking, expiry management, and reduced inventory discrepancies.

02

### Inbound & Storage Optimization

- Streamlines inbound receiving, quality checks, putaway rules, and space utilization using intelligent location mapping to improve warehouse throughput and storage efficiency.

03

### Order Picking, Packing & Dispatch

- Optimizes picking strategies, packing workflows, and dispatch processes to improve order accuracy, reduce fulfillment time, and support high-volume warehouse operations.

04

### Automation, Reporting & System Integration

- Supports barcode/RFID automation, performance dashboards, and seamless integration with ERP, TMS, and third-party systems for scalable, data-driven warehouse management.

## 3. Fleet Management System (FMS)

### Vehicle Tracking & Utilization

Provides real-time visibility into vehicle location, usage patterns, and idle time, helping organizations maximize fleet utilization and improve overall operational efficiency.

### Maintenance & Compliance Management

Automates preventive maintenance schedules, service reminders, and compliance tracking to reduce breakdowns, extend vehicle lifespan, and ensure regulatory adherence.

### Driver Performance & Safety Monitoring

Monitors driver behavior, trip patterns, and safety metrics to promote responsible driving, reduce accidents, and improve fuel efficiency and service reliability.

### Cost Control, Analytics & Integrations

Delivers detailed insights on fuel costs, maintenance expenses, and fleet performance, with seamless integration to ERP, TMS, and telematics systems for centralized management.

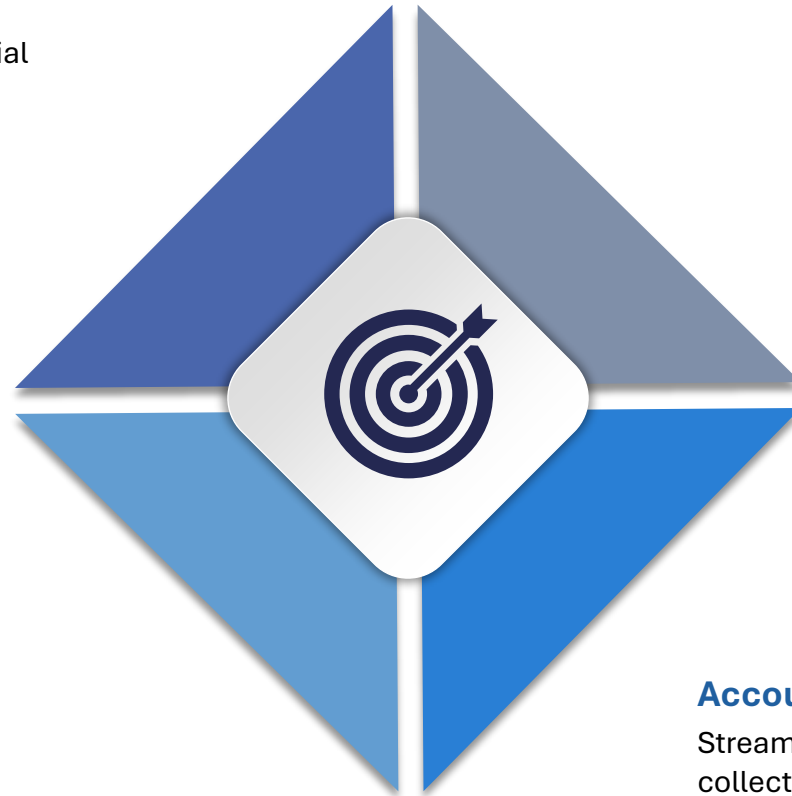

## 4. Finance & Accounting Module

### ERP Integration & Cost Control

Seamlessly integrates with ERP, TMS, and other systems to track costs, manage budgets, and deliver end-to-end financial control across business operations.

### Financial Reporting & Compliance

Provides detailed financial statements, MIS reports, tax-ready data, and audit trails to ensure regulatory compliance, transparency, and informed financial decision-making.

### Automated Billing & Invoicing

Enables accurate, rule-based billing for services, trips, and contracts with automated invoice generation, reducing manual effort, billing errors, and revenue leakage.

### Accounts Payable & Receivable Management

Streamlines vendor payments and customer collections with automated workflows, aging analysis, and real-time visibility into payables and receivables.

## 5. Asset Management System

### **Asset Tracking & Centralized Repository**

Maintains a centralized inventory of all assets with real-time status, location tracking, ownership details, and lifecycle visibility across departments and operational sites.

### **Maintenance & Lifecycle Management**

Automates preventive maintenance schedules, service history tracking, and lifecycle planning to minimize downtime, extend asset life, and reduce unplanned repair costs.

### **Depreciation & Compliance Control**

Supports asset valuation, depreciation calculations, audit trails, and compliance reporting, ensuring financial accuracy and adherence to statutory and internal governance standards.

### **Analytics, Optimization & Integration**

Provides actionable insights on asset utilization and costs, with seamless integration into ERP and finance systems to optimize investments and improve operational efficiency.

# 6. Human Resource Management System (HRMS)

## Performance & Employee Engagement

Supports goal setting, performance appraisals, feedback mechanisms, and analytics to improve employee productivity, engagement, and data-driven HR decision-making.

## Employee Lifecycle Management

Manages the complete employee lifecycle from onboarding to exit, maintaining centralized records, role assignments, and documentation for efficient and compliant HR operations.

## Payroll, Compliance & Statutory Reporting

Streamlines payroll processing, statutory calculations, and compliance reporting, ensuring timely salary disbursement, accuracy, and adherence to labor laws and regulations.

## Attendance, Leave & Shift Mgmt.

Automates attendance tracking, shift scheduling, leave policies, and approvals, ensuring accurate workforce planning, reduced manual effort, and improved operational transparency.

# 7. Mobile Application Solutions

## Custom Mobile App Development

Designs and develops secure, scalable Android and iOS applications tailored to specific business workflows, ensuring high performance, usability, and seamless user experiences.

## Real-Time Operations & Field Enablement

Empowers field teams with real-time task updates, tracking, notifications, and data capture, improving operational efficiency, responsiveness, and decision-making on the move.

## System Integration & Data Synchronization

Ensures seamless integration with ERP, TMS, WMS, and backend systems through APIs, enabling real-time data synchronization, consistency, and centralized operational control.

## Security, Scalability & Support

Implements enterprise-grade security, role-based access, and scalable architectures with continuous support and updates to ensure reliability, performance, and future readiness.

# Technology Expertise

# Why Choose OmniaSys Solutions

## Agile Execution & Faster Time-to-Value

Using agile methodologies, we ensure rapid implementation, continuous improvements, and quicker turnaround times, helping clients realize business value faster and stay competitive.

## Proven Integrations & Reliability

With successful ERP migrations and third-party integrations across leading enterprises, we deliver reliable, secure, and future-ready systems that support long-term business growth.

## End-to-End In-House Expertise

All development, integrations, and support are handled by our in-house team, ensuring better control, faster delivery, enhanced security, and complete ownership of technology solutions.

## Deep Domain & Logistics Expertise

We bring strong domain knowledge in logistics, ERP, and enterprise systems, enabling solutions that align closely with real operational workflows and industry-specific business challenges.

## Highly Customized & Scalable Solutions

Our platforms are designed for high customization and scalability, allowing businesses to adapt systems as they grow without compromising performance, security, or operational efficiency.
